

Intelligent Oil Company

What is the BA Role in an Oilfield Development Project?

Presented by
Morteza, Neha, Tanu and Abid

Agenda

- Project Charter
 - Organization Chart
 - BA's Roles Responsibilities
 - Interaction methodologies
- 
- A decorative perspective grid of light gray lines is located at the bottom of the slide, creating a sense of depth and architectural structure.

Project Charter

Background:

Intelligent Oil, an oil producer company that produces 250,000 barrels of oil per day from its two developed oilfields in Alberta. They have recently discovered their third oilfield named SAIT that is capable of being developed in order to meet their future growth plans.

Project Scope:

- To develop SAIT oil field in order to produce 50,000 bbl/day

Project Objective :

- Drilling 8 oil wells each producing 6,250 bbl/day.
- Constructing a production unit capable of processing 50,000 bbl/day

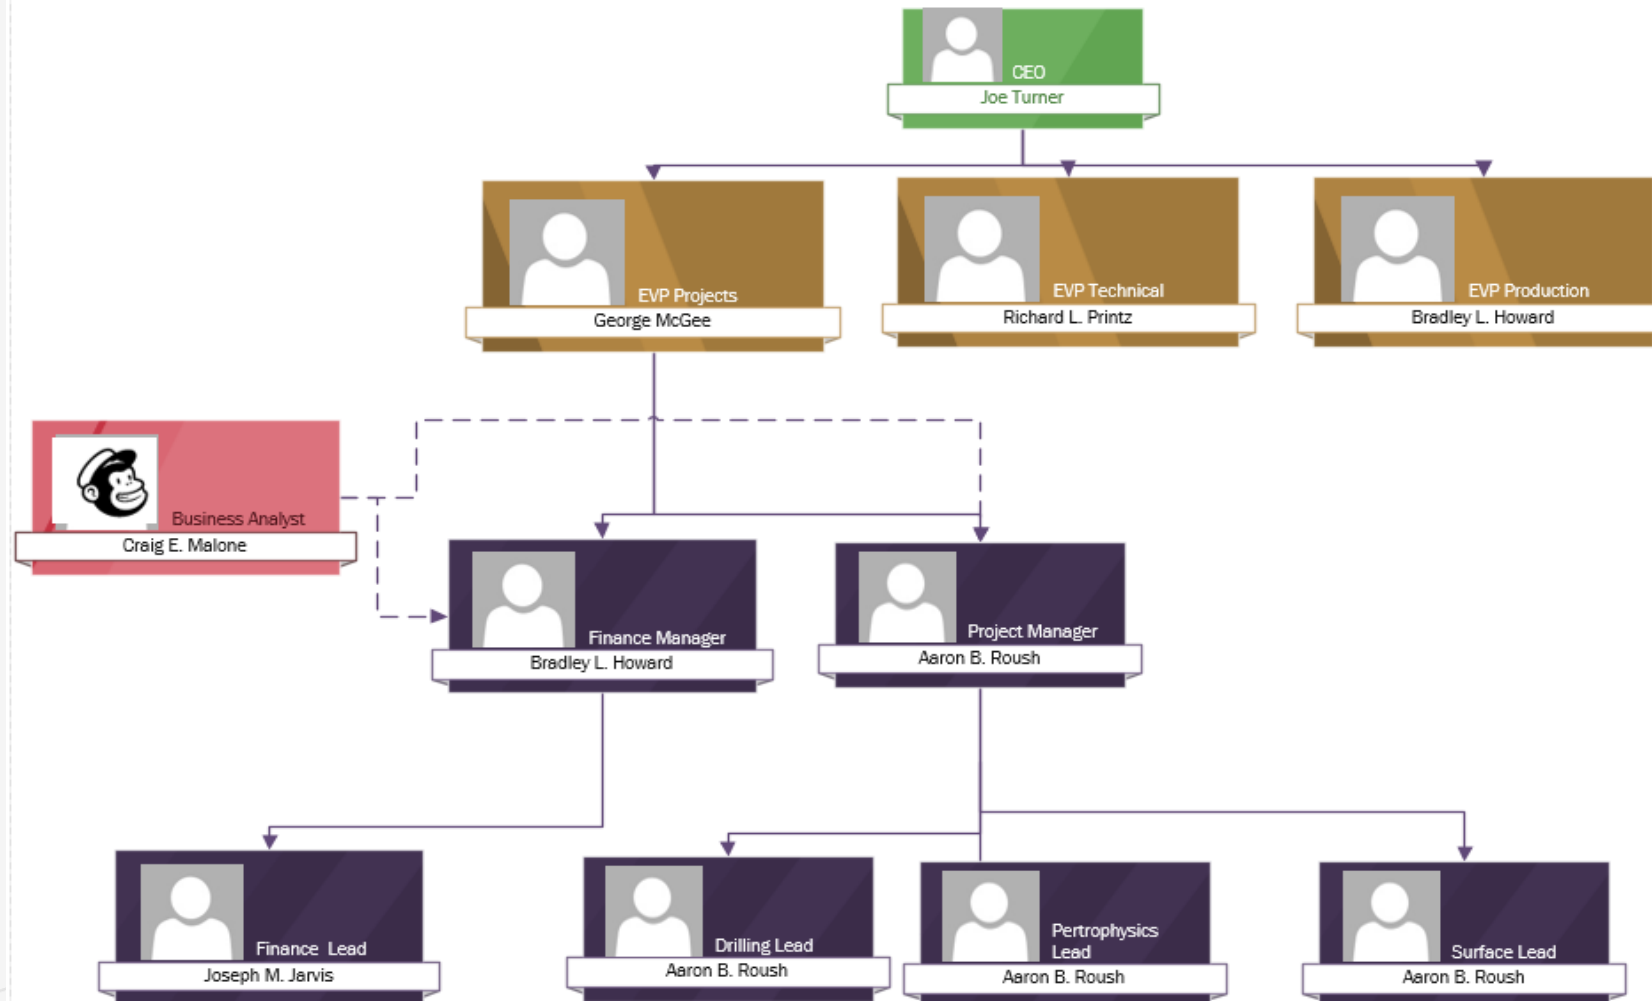

Success Criteria :

- Making profit of 15 % of the investment of the entire drilling process

Risks:

- Not able to meet financial, time and project targets

Organizational Chart

BA's Roles Responsibilities

- Liaising with team leads, project and finance managers and executive vice president
- Gathering project and management requirements
